

Mechanical Technician Job Posting

WHO WE ARE:

A revenue generating, well-financed, dynamic, expanding company dedicated to the research, innovation, design, engineering, and manufacture of medical surgical devices used to prevent blindness caused by certain diseases and traumatic injuries. We are constantly looking for intelligent, creative, detail-and quality-oriented, hardworking people who are driven to make a difference by what they do.

POSITION SUMMARY:

Mechanical technician supporting manufacturing processes in a medical device environment. Will fabricate fixtures for assembly, testing, and bonding operations. Responsible for installation, operation, and maintaining of manufacturing equipment used for medical device manufacturing e.g. polishing machines, adhesive dispenser, and automated visual inspection systems. Will perform basic tasks that involve fabrication and assembly of tooling and fixtures while able to be flexible, cooperative and able to change work tasks, when directed.

REQUIRED SKILLS AND EXPERIENCE:

6 years technical experience in manufacturing or R&D environment 4 years mechanical technician experience in fabrication and assembly of various devices, working from engineering drawings, detailed sketches or verbal instructions. 3 years' experience reading complicated mechanical engineering drawings. Working with engineering, experienced at basic troubleshooting, calibration, failure analysis or modification of test hardware, fixtures, and manufacturing equipment. Good judgment and initiative to execute and complete tasks, resolve problems, and make recommendations. Familiarity with SolidWorks modeling. Good team work skills involving ability to work effectively cross-functionally and cross-culturally. Good English verbal and writing skills.

EDUCATION:

AA or 2 years of college in a technology or science field (engineering, manufacturing, chemistry, metallurgy, etc.)

ADDITIONAL SKILLS AND EXPERIENCE

DESIRED: Experience:

Mechanical repair, machining, tooling, and/or metrology equipment. Precision measurement using visual inspection systems and CMMs. Force, acceleration, and temperature test instrumentation. Medical device cleanroom facilities and equipment. Willing to complete work started by others when required by supervisor.

Skills:

Equipment maintenance, machining, or tooling, in Pharma or Biotech environment.
